Features

By using lamp and monochromator, all of our readers with absorbance mode allows you to measure from 200 to 999 nm freely at your choice of 1nm increment. Xenon lamp(in absorbance) will serve the instrument semi permanent life time which allows the users to experience comfort since lamps do not need to be replaced such as halogen lamps.

Supporting dual injector with variety of shaking technologies and incubating function up to 50°C.

Using INNO-XS™ (21 CFR Part 11 Compliance) offers high performance software and safety reliable security for personal data with CFR Part 11 Compliance function.

INNO-S™

Monochromator and filter optics

INNO-S™ has three main detecting functions. Since INNO-S™ is a monochromator-based microplate spectrophotometer for the absorbance measurements, it requires zero filters and allows you to measure from 200 to 999 nm freely at your choice of 1nm increment. Also Xenon lamps in absorbance will serve the instrument semi-permanent life time which brings the comfortable experiences to the users since the lamps do not need to be replaced such as halogen lamps.

Fluorescence using High Power LED to provide TRF(Time Resolved Fluorescence) and various convenient features as ready to run at "on". Also HPL has semi-permanent life time which the user does not have to go through the burdens such as switching the fluorescence light source every once in a while.

Main Features

- 01 Monochromator-based UV-Vis absorbance
- 02 High power LED and filter-based fluorescence detection for flexibility and performance
- 03 Time Resolved Fluorescence (TRF)
- 04 2µL low volume nucleic acid quantification with NANO-VC™ plate (Option)
- 05 Cell friendly orbital shaking and advanced incubator design up to 50°
